

15 September, 2022

Israel Securities Authority

Tel Aviv Stock Exchange

Dear Madam/Sir,

**Re: Letter of Intent from IDF – testing for the reduction of fuel consumption and emissions**

The Company is honored to report that on 15 September 2022 notification was received from the IDF (Israel Defense Forces) that they will begin to examine reduction of emissions and fuel consumption in IDF vehicle fleets, where fuel consumption is inefficient compared to today's more advanced platforms. This will be done using the Trucknet Smart Catalyst, an integrated catalytic device marketed by the Company exclusively in Israel, Turkey, the Gulf States, Europe and the USA, as stated in the immediate report from 20 June 2022 (Reference number 2022-01-075844).

According to the notification, the IDF operates thousands of these vehicles. In addition, as noted, an order for the devices to be used in the experiment will be sent to the Company from the Procurement Department in the coming weeks.

The cost of a single device is approximately \$4,000 and if the experiment is successful and the IDF decides to purchase the catalyst for its vehicle fleet, the Company should receive considerable income.

The information provided above regarding the experiment to be conducted by the IDF and an order for the devices, to the best of the Company's knowledge, is based on data it holds that has not been checked independently by the Company. Moreover, the Company is unable at this stage to assess the success of the experiment and the chances of successfully selling the integrated device to the IDF.

Yours Sincerely,

Trucknet Enterprise Ltd.

Signed by: Hanan Fridman, Chairman of the Board and CEO
